

Total Cost of Ownership

TCO Model Notes :

2 year costs are approx same

New supplier has much higher lead time

Potential quality issues with new supplier in Year 1

Risk profiles of each should be looked at further

Quick Supply Network Stencil

Quick Supply Network is one of eVSM's **Quick Stencils** and is a specialized supply network stencil designed to visualize and play "what-if" games to help improve the cost and lead time aspects of the network. It is designed for broad usage and with minimal training.

Easy

Benefits:

- Easily visualize, communicate and discuss the supply network for a product family and geographic region.
- Input time/cost data for each leg of the network and automatically generate lead time and cost charts.
- Do "what-if" studies with alternate routes for cost and time improvements or to reduce risk.
- Overlay maps onto geographic detail from any source and perhaps including mapping of adverse events like earthquakes or tornadoes.

Fast

The technical concepts addressed by the Quick Supply Network stencil are shown below.

Focused
